

*tio*logic[®]

Product Catalogue 2013.

Customer number.

Please enter your customer number here
to help us process your order quickly and efficiently.

Preface.

Dear Customer,

We are pleased to present to you the new tioLogic® implant system catalogue.

This catalogue is systematically designed to provide you easy access and to study all information relevant to your daily work. The section summaries provide you with a quick general outline.

Where applicable, you will find a full scale illustration of the relevant product for better recognition. To round things off, there is a table section containing complementary service information or technical data.

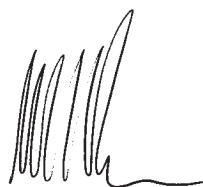

We will gladly provide advice and support at any time, be it with our innovative tioLogic® product concept, our comprehensive service, or with our competent team of specialists.

The name Dentaurum stands for superior quality, dental competence and reliability for more than 125 years. These qualities can be equally applied to Dentaurum Implants. To us, this tradition is both chance and duty in one. Then change is the only certainty according to the motto: better is good's enemy.

We especially recommend our comprehensive, up-to-the-minute, multilingual information on our website at www.dentaurum-implants.de.

We look forward to your order which we will handle quickly with the usual dedication. We also look forward to any praise or criticism you may have, as this enables us to become better.

With best regards from Ispringen

Mark Stephen Pace

CEO Dentaurum Group

Axel Winkelstroeter

CEO Dentaurum Group

The Dentaurum Group.
Worldwide dental competence for more than 125 years.

***Quality is
your demand and
our expertise.***

Dental technology setting standards.

The Dentaurum Group develops, produces and sells products for dentists and dental technicians worldwide. The variety of products for dental technology, orthodontics and implantology is unique in the dental world. Dentaurum Implants, a manufacturer of implants, is a subsidiary of Dentaurum.

Quality inspires confidence.

As the oldest dental company in the world, we have worldwide experience with high-quality dental products. Our market success is based on consistent implementation of customer and market demands. This is why we are committed to the constant further development of the company and continuous improvement of the quality of our processes and products.

Service as added value.

There many reasons for using Dentaurum Group products in the practice and laboratory. Quality is the decisive factor. Our company philosophy is to perfect the quality by providing additional performance and service for our products. We offer a wide-ranging training programme for new and advanced users with an internationally experienced team of course instructors. Contact us for further information.

Customer support.

The implant system.

tioLogic[®]

Maximum safety.

The implant shape and thread geometry of the tioLogic[®] and tioLogic[®] ST implant are ideally coordinated. This ensures that a uniform, bone-conserving flow of force is created both in the cortical and cancellous bone, which simultaneously guarantees high primary stability.

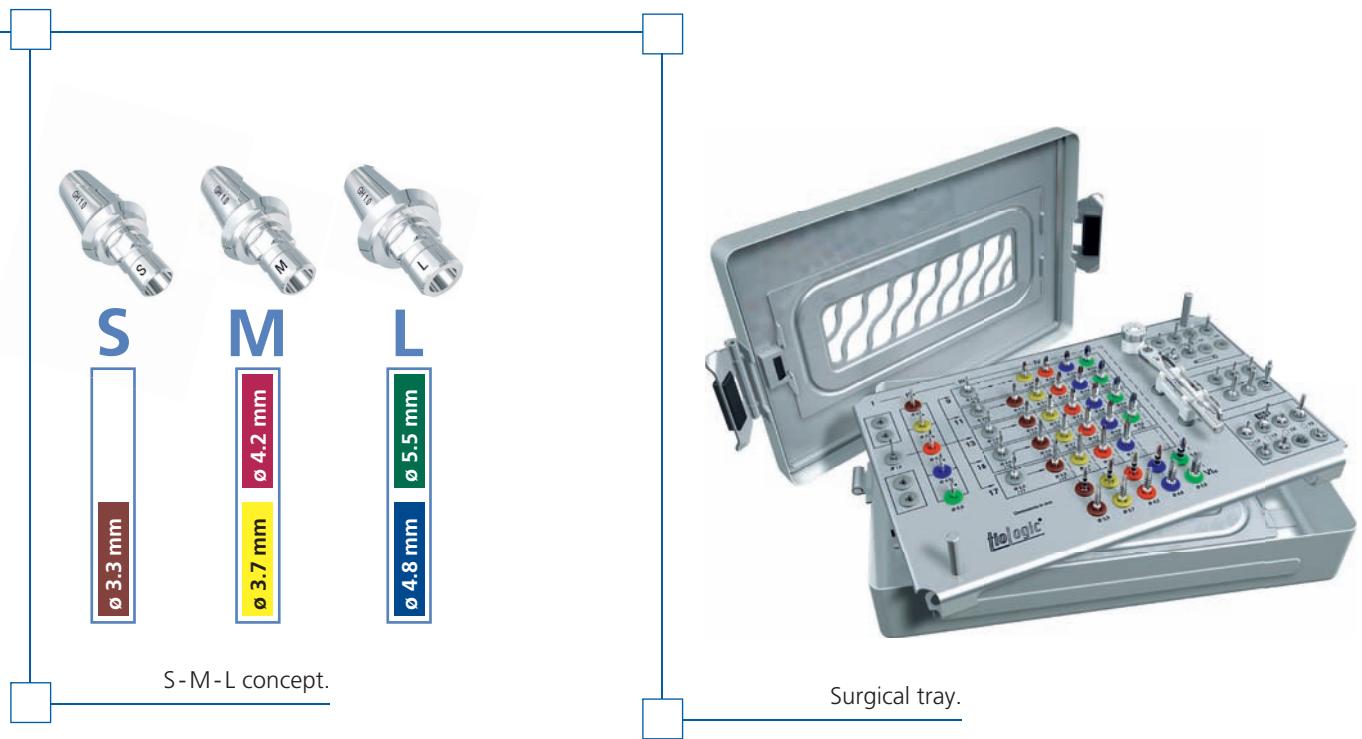

Perfect aesthetics.

The internal PentaStop[®] rotational security with integrated platform switching provides the optimum conditions for a durable, aesthetically perfect superstructure tailored to the individual requirements of the patient using the tioLogic[®] implant system.

Easy handling.

The S-M-L concept provides the user with a choice of 5 implant diameters, 5 implant lengths and 3 prosthetic abutment series for the prosthetic restoration.

The implant system.

The logical evolution.

Meanwhile the implantology is an inherent part of dental treatment. Extensive research and development on the one hand, and the comprehensive expertise of dentists and dental technicians on the other, mean implants are today fitted routinely, much to the benefit of the patient. Dentaurum Implants looks back on over a decade of experience in implantology, the mother concern Dentaurum, on over 125 years experience in prosthetics. The development of tioLogic® implant systems is based on this solid foundation. During extensive dialogue with experts from clinics and dental offices, we combined proven ideas with innovative solutions while considering future demands.

Service.

Of course the hardware of the tioLogic® concept must convince in every respect. As well as the software, the support and the guidance of the vendor. Dentaurum Implants provides the dental team among other things a competent hotline, an extensive documentation, a wide range of courses and valuable materials for patient education.

The factors of success for an implant system.

There are many single factors that, under long-term aspects, make implant treatment a success. Being the developer or manufacturer of an implant system, we have no influence on patient-related factors such as oral hygiene. As far as influence in the areas implant design, system concept or affinity to an attending dentist are concerned, the focus is on three main needs that have emerged as the basic reasons for success:

Safety. Aesthetics. Handling.

Only when all three reasons are equally fulfilled, with demands on safety at the forefront, are the prospects of success at best.

That is why special attention was paid to excellent fulfilment of the specification in these three basic areas.

You will find details on safety, aesthetics, and handling in the tioLogic® SafetyPass.

Conclusion:
A convincing concept.
State of the art.

Maximum safety.

It is of fundamental importance for a modern implant system that its safety is convincingly proven and documented in both theory and practice through recognised methods. The tioLogic® implant's outer geometry was developed in cooperation with Bonn University. Their comprehensive FEM analyses^{1,2} prove the above-average results for peak strain and distortion levels. The areas thread design, thread geometry, and implant form were examined separately.

Perfect aesthetics.

Implant borne restorations are increasingly preferred to fixed/removable or tooth substance-challenging restorations. Also when considering improved aesthetics. In this respect, it is important that implants and superstructures provide aesthetically perfect and long-term solutions. The design of the inner connection of the tioLogic® implants avoid bone loss and ensure an excellent compound stability. The inner geometry was developed using FEM analysis³, its stability has been proven by long-term durability tests according to ISO⁴ at the Fraunhofer Institute.

Easy handling.

Easy, safe and convenient handling of all parts is an important precondition for economical work with a modern implant system. During conception of the tioLogic® implant system, we put into practice some fundamental handling aspects such as colour-coding for fast visualisation, laser markings, optional integrated depth stop, and simple-to-use packaging. The unique S-M-L system provides prosthetics with convincing practice and laboratory related customisation possibilities and clarity.

Easy Handling.

The S-M-L concept.

5 implant diameters. **5** implant lengths. **3** series of abutments.

Integrated platform-switching.

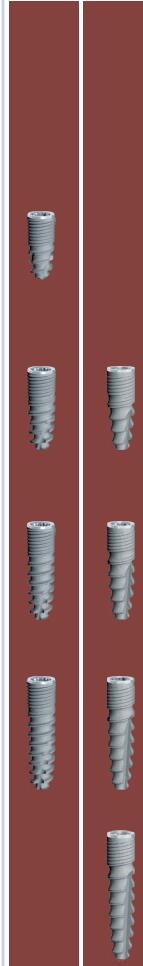

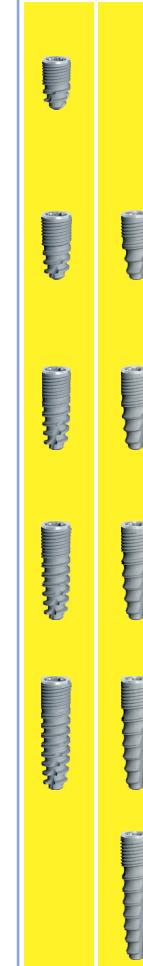

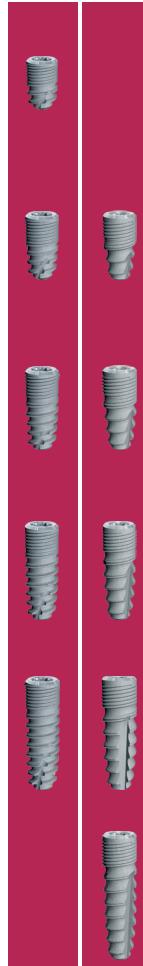

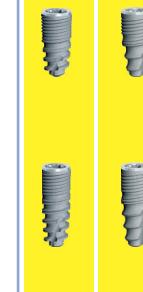

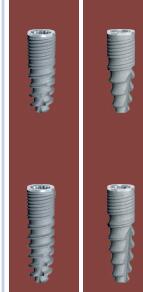

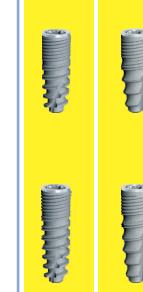

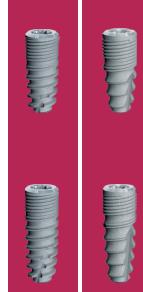

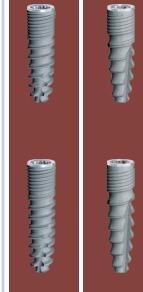

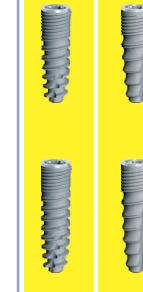

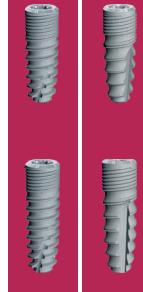

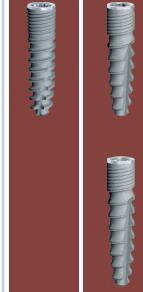

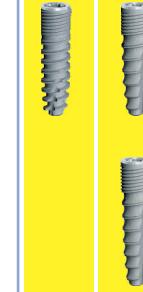

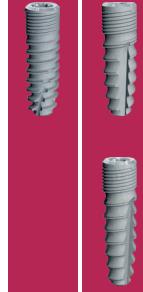

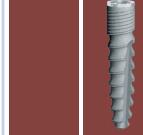

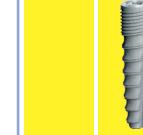

The optimal grading of implant diameters and lengths ensures that the appropriate implant is used for the indication. Components of the 3 series of abutments are made of plastic (temporaries), zirconia, Titanium and precious metal and include CAD/CAM, bars, ball abutment, AngleFix, SFI-Bar®, LOCATOR® and magnets. The construction components S are used for the implant diameter 3.3 mm, the construction components M for the implant diameters 3.7 mm and 4.2 mm and the construction components L for the implant diameters 4.8 mm and 5.5 mm. For exact identification all components are marked with S, M or L by laser.

3 series of abutments.

5 implant diameters.

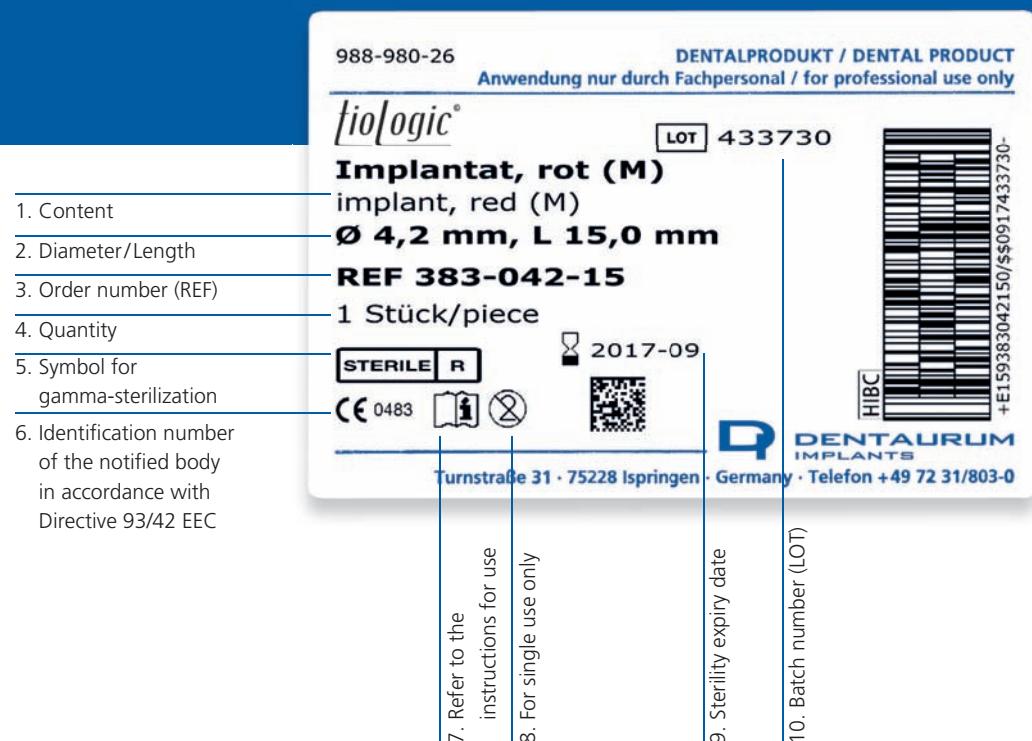

Prosthetic screw

	11.0 mm			
	13.0 mm			
	15.0 mm			
	17.0 mm			
5 implant lengths.				

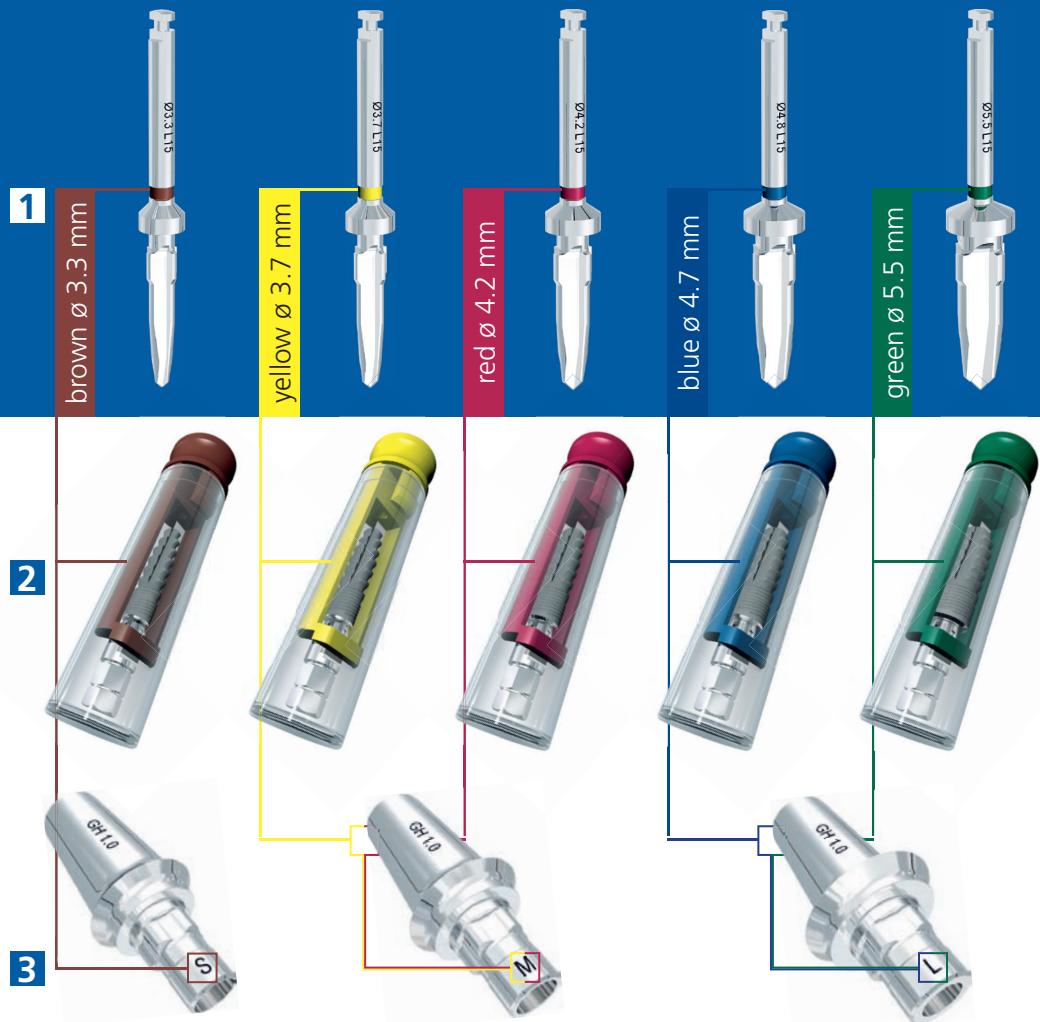

All abutments and implants on a scale of 1:1.

Identification product.

All information – quick, clear identification.

All basic information needed by users and their assistants is on the label. These so-called sandwich labels allow fast and distinct documentation in the Patient ID card. The pictograms are intuitive and conform to international standards, thus providing rapid and clear flow of information. Further labels for the surgical protocol and patient ID card are also included.

1 Instrument colour coding.

All surgical instruments have a different coloured ring on the shank for clear identification of the diameter. The colour code for the diameter corresponds to that of the implant.

2 Implant colour coding.

The plastic implant holders are colour coded to indicate the relevant diameter.

3 S-M-L component laser marking.

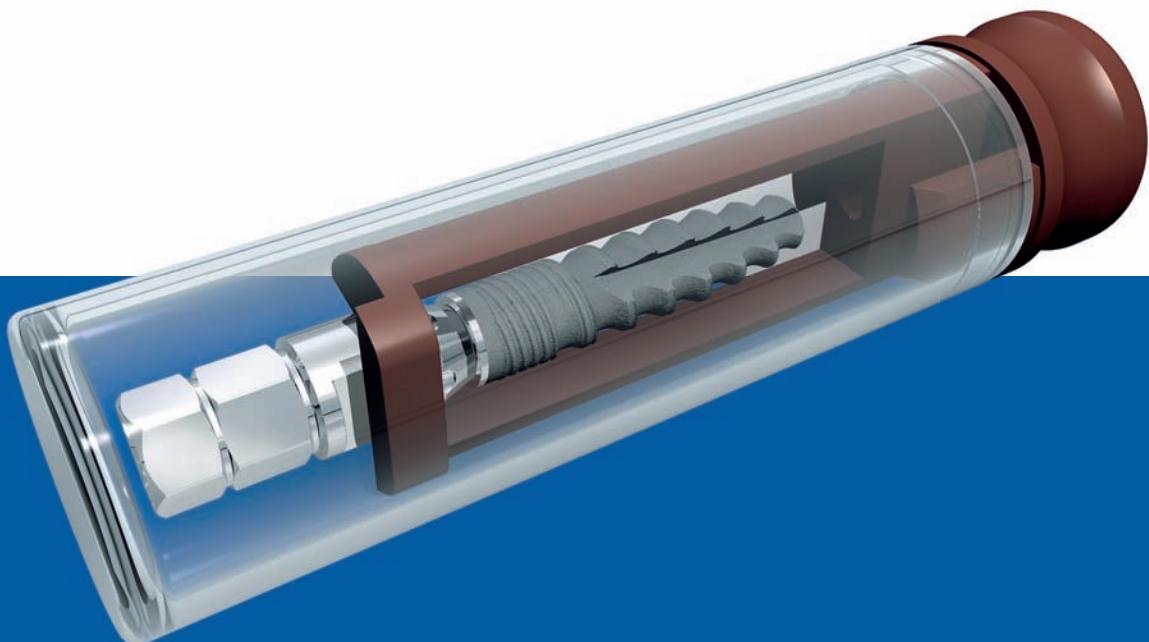

All components from closure screws and gingiva formers to the impression and prosthetic components are laser marked with S, M or L to correspond clearly with the respective implant platform.

SURGERY.

It is essential that a modern implant system provides the operator with an optimal combination of high flexibility, clear organization, easy handling, an efficient technique and maximum safety and reliability. The surgical components should be suitable for use with any indication, also with difficult cases, and should be manufactured to a high quality. The design of the *tioLogic*® implant system from Dentaurum Implants is based on more than a decade experience and on close collaboration with experts.

Surgery ■ TIOMESH tray

■ Bone regeneration

REF 360-010-00 TIOMESH tray

Complete with membrane system for the regeneration of oral bone defects (designed by Dr. M. Sontheimer)

- reconstruction of local alveolar ridge defects
- augmentation of circumferential or regional ridge defects
- pre-implantological and post traumatic immediate reconstructions
- enables simultaneous bone augmentation during placement of all types of conventional endosteal implants
- fixation and stabilisation of the membrane through a central punching for the fixation with the closure screw of the implant
- treatment of bone defects in cases of peri-implantitis
- fixation of bone blocks

■ Content TIOMESH tray

REF 360-100-00		Titanium Mesh	20.0 x 10.0 x 0.2 mm
REF 360-110-00		Titanium Mesh	25.0 x 15.0 x 0.2 mm

Surgery ■ TIOSET® tray

■ Bone regeneration

REF 350-010-00 TIOSET® instrument tray

Complete with instrumentarium for dental surgery and implantology (designed by Dr. M. Sontheimer)

- all instrument functions specially redesigned and modified for use in surgery and implantology
- optimal handling due to the uniform design of the instrument handles
- impact-resistant and systematic storage of instruments in the specially designed wash-tray

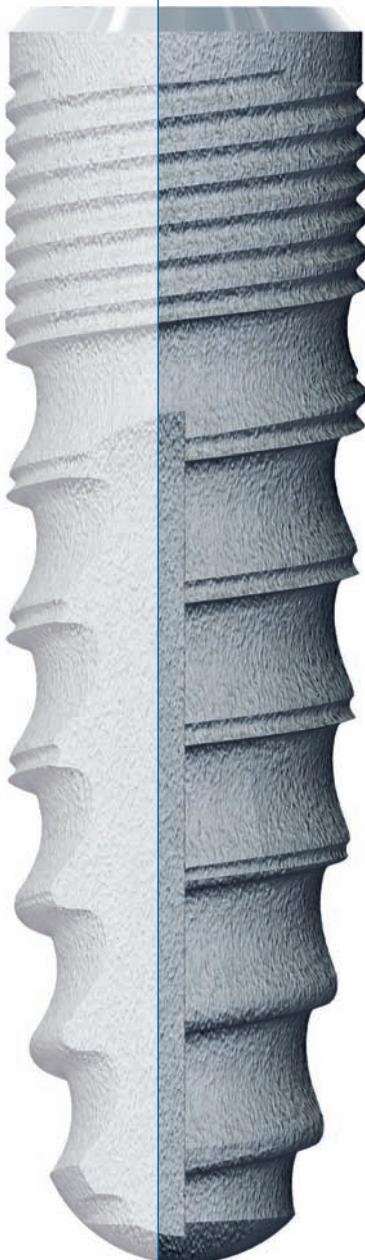

■ Content TIOSET® instrument tray

Dental mirror 2 pieces	Wide support surface for retracting the corner of the mouth. No injury to the corner of the mouth.
Dental probe	Exchangeable attachment.
Periodontal measuring modified	For checking the bone depth after pilot drilling.
Dental tweezers	Slimline
Tissue forceps	Special serrations (very small and slender) hold the tissue flap securely and atraumatically.
Scraper	For removing soft tissue debris and for smoothing edges of bone.
Sharp curette	For removing soft tissue debris (e.g. from the alveolus) and grafting bone material.
Ball-end plugger	For adapting grafted bone or augmentation material.
Double retractor	For gentle retraction of the mucoperiosteal flap. No traumatization of the tissue due to reliable contact with the bone. Narrow side for use in distal area, broad side for use in the anterior area.
Rasparatory broad	An additional instrument for gently loosening the mucoperiosteal flap.
Rasparatory narrow	For loosening the mucoperiosteal flap at the incision or papillae.
Micro-scissors	For thinning or cutting the mucoperiosteum flap.
Needle holder	Slimline, long shape allows universal use.
La Grange sciccors	Can be used for all areas due to the dual-curve design.
Graft material dish	For collecting bone harvested during implant placement with the implant system or for mixing graft material.
Drill block	For secure storage of drills.

tioLogic[®] ST

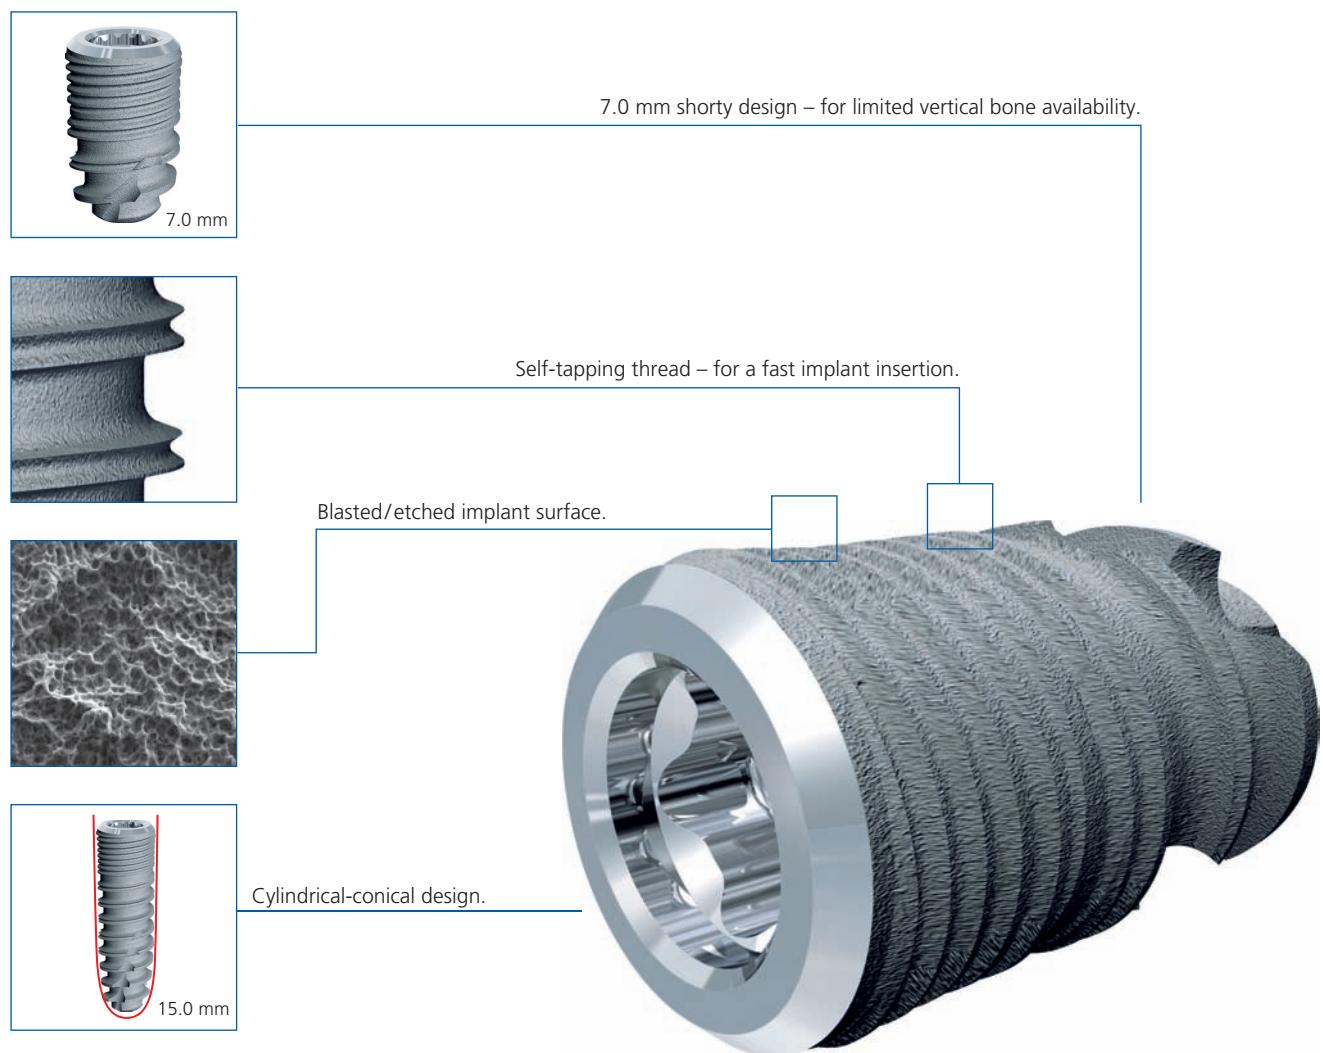

tioLogic[®]

tioLogic® ST

The patented macro and micro design of the tioLogic® implants has been developed further under biomechanical aspects to impact the implant insertion and the healing positively and to extend the range of indications¹. The modified self-tapping thread geometry enables in combination with the reduced thread pitch a fast and atraumatic implant insertion at a steady insertion torque and a high primary stability. Additionally the tioLogic® ST 7.0 mm implant extends the range of indications at limited vertical bone availability.

All tioLogic® ST implants have the tried and trusted S-M-L concept. Therefore they are compatible with the existing prosthetic series of abutments and fit in perfect in the tioLogic® product portfolio. The implant site for the tioLogic® and tioLogic® ST implants is prepared with the same rotating instruments.

PROSTHETICS.

Prosthetic components of a modern implant system should provide the dental technician with the ideal combination of aesthetics, customizability, clear organization and easy handling. This not only involves having an optimum selection of prosthetic components in different materials for all indications but also efficient component flexibility. The user has a choice of all prosthetic components in 3 prosthetic series of abutments (S-M-L) with 5 implant diameters.

Series of abutments S

ACCESSORY.

Product development of surgical and prosthetic accessories at Dentaurum Implants also focuses on the user. An efficient, reliable, precise technique is only possible with an implant system that has specifically designed accessories, e.g. a functionally reliable torque ratchet or optimal laboratory preparation instruments.

SERVICE.

In implantology in particular, comprehensive, concise and significant information is indispensable. Therefore most of the information around the tioLogic® implant system are available both in digital and in traditional form. They are divided into basic, specific and informative documents for patient advice.

Service.

Information material.

Basic user documentation.

The basic folder (REF 989-958-20) concisely presents fact on the most important tioLogic® components and their advantage to the user. The Surgery Manual (REF 989-959-20) describes the complete process from diagnosis and implant insertion to impression taking. The Prosthetic Manual (REF 989-960-20) carries on where the Surgery Manual (REF 989-959-20) leaves off; describing various methods of prosthetic restoration through many diagrams and photos.

Specialized user information.

The reliability and SafetyPass (REF 989-963-20) describes in detail tioLogic® safety concept, presenting the idea with tangible examples and documenting the high standard of safety through extensive research results. Use the Implant Planning (REF 989-966-12) form to fill out all relevant planning details and transfer these to the dental laboratory for prosthetic planning. The Surgical Protocol (REF 989-966-02) contains all data specific to implant and insertion and surgery for each individual case. The Practice Record Card (REF 989-966-22) acts as a messenger between dental office and dental laboratory making for effective and rapid communication of all relevant implant and prosthetic data.

Documentation for personal consultancy.

This specialised communicative medium is designed for use in personal patient consultancy. It acts as a guideline and explains the principle behind implant treatment in a clear and comprehensible manner.

Patient Information.

Extensive patient advice and education builds trust in the clinician and is an important premise for the success of treatment. Dentaurum Implants offer a compact range of high-quality materials developed in close cooperation with experienced users.

■ PEEK

Thermoplastic high-performance polymer

Physical and mechanical properties
(solution heat treated)

Colour	white
Yield strength	95 MPa
Elongation	> 25 %
Modulus of elasticity (flexion)	4.2 GPa
Operating temperature	260 °C / 300 °C (continuous / temporary)

Chemical composition (% mass)

Polyetheretherketon

■ Titanium magnets

Housing	Pure Titanium grade 4
Magnet core	Permanent magnet (Sm ₂ Co ₁₇)
Magnet core welded gastight in housing	

Technical Information ■ Quality system

Quality assurance.

Quality assurance for the user and patient.
Dentaurum Implants has over 10 years experience in implantology, while its parent company Dentaurum can look back on more than 120 years experience in prosthetic dentistry. This solid foundation ensured that development was based on a wealth of experience with the focus on the user and high-quality production of the tioLogic® implant system.

In all its business activities Dentaurum Implants GmbH, like the parent company Dentaurum, meets the requirements of the international quality management standards.

Norm:

- DIN EN ISO 9001:2000
Quality Management Systems
- DIN EN ISO 13485 Medical Devices –
Quality Management Systems

The term "quality management" covers systematic planning, implementation and documentation of all activities that have an influence on the quality of a product before, during and after its manufacture. The focus is not therefore solely on the final inspection of a product but on continuous quality control during development of the product, from raw material to manufacture right through to storage and sale. The above standards define in detail the criteria for ensuring comprehensive quality assurance by a company for all its operating procedures.

Based on this quality management system Dentaurum Implants guarantees traceability and that the quality of the products and services will meet the expectations of the customers and patients. The products fulfill the fundamental requirements of medical products in terms of product performance and patient safety as defined in European laws and directives. As the respective products of Dentaurum Implants GmbH meet the requirements of the European Directive 93/42/EEC for medical products, they carry the CE mark.

Eco-management system.

The eco-management system and the quality management system are integrated in the Dentaurum Group management system. The eco-management system is implemented by the Management System Working Group, which is made up of members representing eco-protection, hazardous goods safety, health and safety, material science and quality management.

Scope of validation.

The eco-policy, eco-management system, eco-programme, eco-audit completed, eco-audit scheme and the basic environmental statement of Dentaurum, J.P. Winkelstroeter KG and Dentaurum Implants GmbH, Ispringen, Turnstraße 31, Germany, fully comply with the standards and requirements of the Regulation (EEC) No. 761/2001 (EMAS II).
